

Compact ascender

D41

Ideal as spare ascender or use in hauling and rescue systems, incorporating X-Cam.

Key features include:

- X-Cam advanced tooth design
- X-Cam superior geometry
- Two lower and one versatile upper attachment points
- High strength & durable construction
- Individual serial number

X-Cam has a more advanced tooth design than traditional cams and is more suitable for industrial applications as it does not pluck the rope, so reducing rate of rope wear.

X-Cam geometry has been developed to address a number of issues:

- Does not jam, even against knots
- Provides high degree of grip on ropes of varying condition including after rupture of sheath
- Highly effective on angled ropes
- Facilitates down-climbing

Two attachment points allow cowstail and footloop to be connected separately which eliminates the need to open a loaded karabiner. With versatile upper attachment point allows use in hauling and rescue systems.

The materials and design used in construction have been selected to provide high strength and durability needed for industrial applications.

Each device is individually numbered making equipment management easier.

Rope diameter 9-13mm

Specifications:

Size:

EN Test Mass: 125kg

Loading: Not Applicable

Conformity: EN567, EN12841(B)

Materials: Aluminium, stainless steel and nylon

Weight (kg): 0.17

Industries: Rope Access and Rescue
