

Hurricane rope grab w pulley

D431

Integral component of RescuePack casualty recovery systems.

Allows creation of a quick and simple pulley system at any point along a kernmantel rope.

Very widely used in fire and rescue service. Selected for use by all official UK Urban Search and Rescue Teams. Received innovation award by British Safety Industry Federation.

Unique, patented product available only from heightec. Lightweight alloy construction. X-Cam design is specifically for industrial or professional use and offers immediate purchase on the rope whilst minimising the potential for rope damage. The X-Cam design will continue to hold over 100 kg on a rope even in the extreme event of a sheath being ruptured.

The simplicity and compactness of the Hurricane is a major advantage in allowing non-experts to achieve the lifting of a suspended casualty. It is the only product to allow intuitive assembly of such a system. Because the device can be attached at any point along the rope, the lifting system can be remote from the casualty, reducing the amount of rope required by around 70%.

10.5-11mm rope

Available in RescuePack Reach™ (WK32) and Rescuepack™ Pro (WK35)

Features:

Self locking pulley catch with simplified operation

Karabiner attachment near cam - can be used to reset pulley systems

Low profile attachment for tool tether

Stainless steel version available for increased corrosion resistance - D43

Specifications:

Size:

EN Test Mass:

Loading: 2kN WLL in normal use

Conformity: EN12278, EN12841(B)

Materials: Alloy body, stainless cam, nylon wheel

Weight (kg): 0.33

Industries: Fire and rescue service, rescue after a fall, construction, renewables, telecoms.
