

No minimum pallet weight is required to operate these crane forks

Our pallet crane forks allow pallets to be picked up and moved using an overhead or lorry mounted crane.

With a 'Bow & Eye' head design, notched lifting positions (800 / 1000 / 1200mm) allow for picking up empty or loaded pallets.

The 'A' frame design offers an extremely strong yet lightweight product, suitable for use in sectors such as industrial and off-shore where quality, safety and durability are essential requirements

	PG100/2 SSB/B	PG120/3 SSB/B
