Tractel®
TECHNICAL SHEET

High-Visibility

Vest

Ref.: T- 2182/EN
Revision: 00
Date: 01/2019

APPLICATION

The safety equipment at height is not only essential to avoid operator falls, but also for other applications such as high visibility for operators. To complement its range of PPE fall arresters, Tractel® is launching a high visibility vest compatible with all harnesses without belt in its height safety range.

Once the harness has been set up in the vest, the user can easily slip on the garment with the harness fitted in.

The high-visibility vest, in fluorescent yellow or orange, makes the wearer visible at all times and in all weathers thanks to the retro-reflective warning strips. This is especially important in poor working conditions, both inside and out: night or darkness, challenging weather, nature of the environment.

TECHNICAL CHARACTERISTICS

- Tractel®'s retro-reflective vest comes in one size only.
- The sides can be let in or out thanks to clever inlays connected by an elastic cord, adjustable using a clip.
- The front of the vest has two double pockets, each with a flap that can be closed with press studs.
- The honeycomb-structure lining reduces transpiration for the wearer's comfort. It is removable, attached to the vest by a zip fastener.
- Removing the lining makes it easy to position the harness within the vest.

It comprises:
- A fluorescent yellow or orange outer fabric of polycotton (50% polyester / 50% cotton).
- A honeycomb-structure lining, black in colour and 100% polyester.
- A 50 mm-wide retro-reflective strip, grey.
- Weight 660g.

DESCRIPTION

The high-visibility vest, in fluorescent yellow or orange, makes the wearer visible at all times and in all weathers thanks to the retro-reflective warning strips. This is especially important in poor working conditions, both inside and out: night or darkness, challenging weather, nature of the environment.

NORMS

The high-visibility vest conforms to ISO standard EN471 and also to new standard EN ISO 20471, class 2.
