

# Fork Mounted Wheelie Bin Handler

Designed for handling large wheelie bins, Contact's wheelie bin handlers allow bins to be picked up, transported and emptied whilst utilising the forklift truck.

With adjustable catch sections to allow for small variance on bin widths, the wheelie bins can be safely picked up via the side trunnions and transported to the waste receptacle where the contents of the bin is to be tipped into

With no moving parts, wires or pulleys, the wheelie bin is simply positioned against the side of the waste receptacle, and with forward motion applied, the bin rotates to the required angle suitable for tipping

**It is highly recommended that a sample bin be sent so as the attachment can be adequately tested (For 'Sprung Lidded' wheelie bins a sample bin would be required)**

Model Ref	Capacity	Max Fork Size	Fork Spread	Wheelie Bin Type	Weight
WBH-1100L	500kg	145mm x 60mm	685mm	1100 litre Flat Lid	135kg
WBH-1100SL	500kg	145mm x 60mm	685mm	1100 litre Sprung Lid	145kg
