

DRYSUIT HANGER

Northern Diver have designed a drysuit hanger specifically for dry diving suits with hard soled boots.

Using this type of hanger, the bottom of the drysuit legs (where they attach to the drysuit boots) are placed in the drysuit hanger head and the suit is then suspended upside down, allowing all the excess water to drain away.

As is good drysuit maintenance practice, please ensure that you drysuit is completely clean and dry before storing, by rinsing any salt, grit or dirt away using fresh, clean, lukewarm water. The drysuit should then be inverted and hung on our drysuit hanger, with the drysuit zip fully open, in a well ventilated area.

Once the drysuit is completely dry, it can then be stored on a suitable garment hanger, in a cool, dry place and out of direct sunlight. Alternatively, providing the drysuit is completely dry, the drysuit can be correctly folded, placed in its drysuit bag and then stored in the (above) recommended environment.

Specifically designed for drysuits with fitted boots

Inverted drying for a neoprene or membrane drysuit

Manufactured from lightweight heavy-duty material

Flat-packed for easy storage and transportation

Really useful drysuit accessory

Sizes available : one
