

# THOR SAFETY OVER BOOTS

Our Safety Over Boots improve diver safety and extend the working life of all types of diving suit, even in the roughest conditions, by protecting the lower extremities from sharp and abrasive materials and impacts.

Wearing the boots with the optional lead insoles ensures a more secure foothold for the diver and also greatly reduces the risk of a feet-first ascent.

The specification set for these boots is uncompromisingly high. By insisting on superior quality materials and workmanship we are able to assure that the boots will prove to be exceptionally resistant to wear, even on work sites which subject them to exacting demands.

Specifically designed to counter the rigours of commercial diving, the diver is assured of a far higher degree of protection than can be expected from other footwear inappropriately adapted for diving.

- Steel toe cap overboots
- Toe cap tested to **EN 12568:2010**
- Improves diver safety
- Extends the working life of diving suits
- Protects the lower extremities from sharp, abrasive materials and impacts
